To be effective, TNR must be done to all cats in a colony. Toward this goal, FBI structures services to be cost effective, and designed to be done on a large scale. As such, we offer one standard sterilization package for unowned colony cats:

Sterilization (spay/neuter & vaccination) package -- \$25

- Spay or neuter by licensed veterinarian
- Surgical pain control medication
- Long-acting injectable antibiotic
- Application of Revolution parasite medication

- Examination
- Ear cleaning
- Rabies vaccination
- FVRCP (3-in-1) vaccination

- Surgical left ear crop (also called eartip)

Important:

- We do not offer any optional vaccinations, tests or services.
- The cropping of the left ear is mandatory, unless the veterinarian determines that doing so will cause harm or complications for the cat.
- If, during the examination, additional injuries or health conditions are discovered, additional surgery or treatments may be mandated by the veterinarian.
- Please read and thoroughly understand the surgical release!
